

Anti-Heat Compound and Tempilstick - Temperature Indicators

Tempil's industrial melting point standards are simple, reliable and guaranteed accurate within 1%. Tempilstick technology was developed to meet the demand for measuring surface temperatures during preheat, interpass and postweld heat treatment temperatures. When the Tempilstick mark melts...the temperature has been reached. Nothing could be simpler. Over 100 temperature ratings available between 100°F (38°C) and 2500°F (1371°C). Lot numbered for NIST traceability in accordance with ISO 10012-1.

Uses include: Determining surface temperatures during welding and metal fabrication including preheat, interpass, postweld heat treatment, annealing and stress relieving. Determining operating temperatures of bearings, transformers, steam traps, molds, PC board preheaters, motors, electronic components, hydraulic systems, commercial irons, hot plates & heat exchangers.

Note: Tempilsticks are available to purchase individually or they are packaged in standard boxes of 10. Call customer service at 317-562-1483 for IWDC pricing on all Tempil products.

Part#	Description	Std. Pkg.
AHTB	Anti-Heat Compound, 12 oz. Tube	1
AHQT	Anti-Heat Compound, Quart ...	1
