

International Cryogenics, Inc.

International Cryogenics' Dewars

The Dewar Line by International Cryogenics, Inc. consists of 7 models* ranging in size from 5 liters to 50 liters. In response to a strong demand pattern for certain models, IC has joined with IWDC to provide a range of the four most popular models for direct shipment from the IWDC warehouse. These models are the IC-5D, IC-10D, IC-20D and the IC-35D.

These models are the small, convenient sizes used most frequently by dermatologists, general practitioners, medical and bio labs and hospitals. The frequently requested accessories are also included in this package arrangement. These accessories include the dipper and liquid withdrawal device.

The IC dewars were designed to provide light weight and easy handling, good ergonomics and rugged construction. These cryogenic vessels all have excellent holding times, large opening for easy pouring, attractive colors and styling and they all carry a 5-year warranty.
