

- Now welders can conform to ANSI Z-87 specifications by wearing safety glasses under their welding helmets while at the same time providing the magnification they get with reading glasses or 2 x 4 1/4" magnifying lenses.
- **MAG-Safe™** magnifying safety glasses offer a better field of vision because they are closer to the eyes than 2 x 4 1/4" magnifying lenses.
- **MAG-Safe™** magnifying safety glasses provide ANSI Z-87 protection not available with reading glasses.
- **MAG-Safe™** magnifying safety glasses allow the user to take advantage of the full viewing area of extra large lenses. 2 x 4 1/4" magnifying lenses block off part of the extra large lens viewing area.
- **MAG-Safe™** magnifying safety glasses are available in powers 1.00, 1.25, 1.50, 1.75, 2.00, 2.25, 2.50, 2.75, and 3.00.

**MAG-SAFE™**  
MAGNIFYING SAFETY GLASSES

**Bifocal Magnifiers**

- Read small print
- Saves money over prescription safety glasses
- Improved performance
- Increased productivity

**Full Lens Magnifiers**

- For use under the welding helmet
- Allows vision thru entire viewing area of large welding filters
- Eliminates distortion caused by flat magnifiers

All MAG-Safe™ Magnifying Safety Glasses meet or exceed ANSI Z-87 specifications. ANSI Z-87 requires wearing safety glasses under a welding helmet.

MAG-Safe™ Magnifying Safety Glasses are available in diopters 1.00, 1.25, 1.50, 1.75, 2.00, 2.25, 2.50, 2.75 and 3.00.

Part#	Description	Std. Pkg.
